15. Rider score and leaderboards
16. Your bike: details and shape
17. Riding pillion
18. Your plan, garage and settings
19. Privacy, offline use and help

Set up once, ride safer every time

CoRoute is a free app for motorcycle riders. Every safety feature works for every rider, on every plan. Groups add live coordination: a shared map, talk, regroup and roles.

1 **Create your free account** with e-mail or Google. (Guest mode has been retired, so your rides, contacts and safety settings are always saved.)

2 **Add your emergency contact** and phone number. CoRoute texts this person if you crash or raise an SOS.

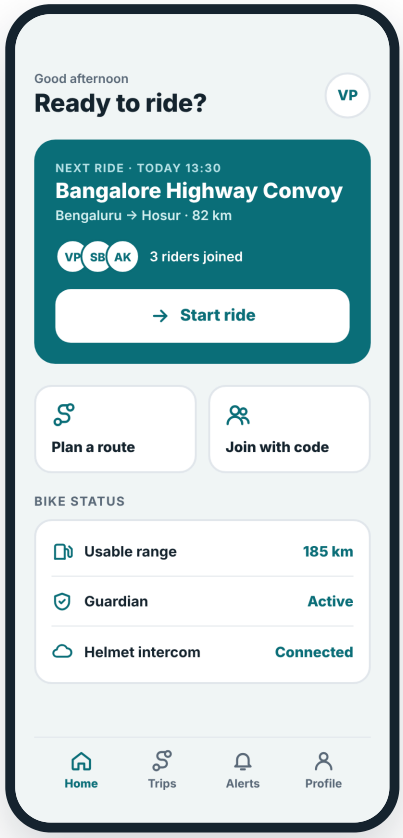

3 **Fill in your medical info** (blood group, allergies, notes for a doctor). It shows on your lock screen, and in an emergency it goes to the people helping you. There is no switch to set (chapter 9).

4 **Add your bike** in Garage: model, bike type, engine cc, colour, tank and mileage. These details are needed before you create or join a ride as a rider (chapter 16). They power fuel range and engine-rest advice, and your group sees your bike's shape and colour on the map.

5 **Allow location, notifications, motion and microphone** (the microphone is for the intercom and siren alerts). Run the **pre-ride phone check**: it tests GPS, sensors, SOS readiness and battery in under a minute.

6 **Mount your phone on the handlebar**. Crash detection works best on a mount; CoRoute tells you if it thinks the phone is in a pocket or tank bag.

APP DESIGN SCREEN

Home: your next ride, quick actions and bike status

About the pictures. REAL APP SCREENSHOT taken from the app on an Android emulator. APP DESIGN SCREEN the design the app is built to (sample names and numbers). ILLUSTRATION · BUILT IN 3.55 drawn to show a feature that is built in version 3.55 (final screens may differ slightly). MOCK-UP · BUILT IN 3.55 a mock-up of a 3.55 screen drawn from the app's code and wording; not a screenshot. CONCEPT · NEXT FEATURE an idea for a future version; not built yet.

From idea to route in a minute

Plan a route

Tap **Plan a route**, give the trip a name, pick the destination on the map and add stops (fuel, food, a viewpoint). CoRoute shows distance, time and stops, and saves the map along the route automatically so navigation keeps working where signal drops.

Ride solo or invite your group

A Community (free) rider starts solo rides with every safety feature. To ride as a group, **one** member needs a group plan and hosts the ride; everyone else joins for free with the **invite code** or link and gets the host's group features for that ride.

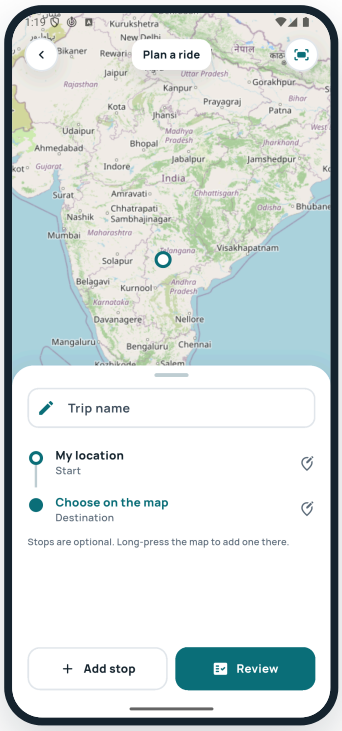

Join a ride

Tap **Join with code** and enter the 6-character code the host shared.

Before you go

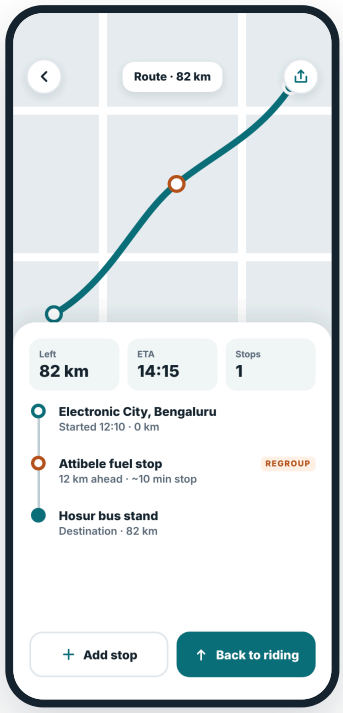

- Check the weather along the route shown in the trip review.
- See where you will need fuel, from your bike's real range.
- Set your guardian (a family member who can follow the ride live).

REAL APP SCREENSHOT

Planning a ride (real app)

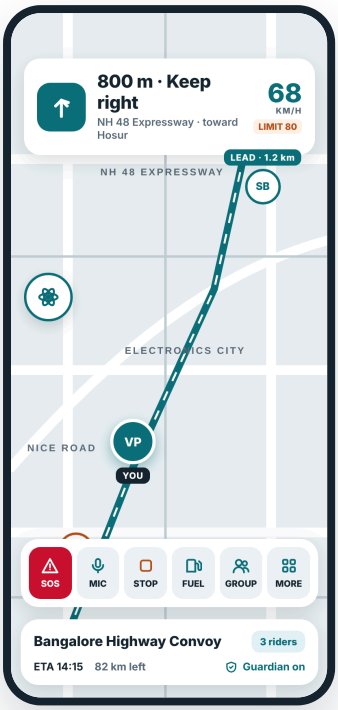

APP DESIGN SCREEN

Route with stops, ETA and distance left

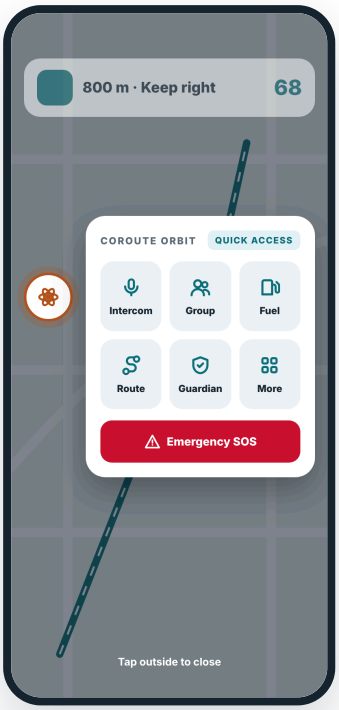

A cockpit made for gloves and glances

APP DESIGN SCREEN

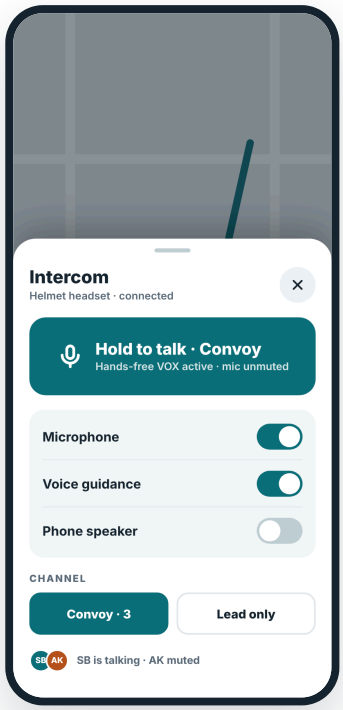

Navigation: next turn, speed and limit, your group on the map

APP DESIGN SCREEN

Orbit: one tap to Intercom, Group, Fuel, Route, Guardian and SOS

APP DESIGN SCREEN

Intercom: hold to talk to the whole group or to the leads

What you see

- Big turn arrows and spoken directions; re-routing when you leave the route.
- Your speed and the road's limit; a warning before sharp bends.
- Every rider of your group live on the map.

What you hear

- Turn-by-turn voice, road hazard warnings and group alerts, all short and clear.
- Push-to-talk intercom over your helmet headset. The microphone is only on while you hold the button (or in hands-free mode you choose).
- Music from other apps gets quieter for a CoRoute alert and comes back right after; emergencies pause it (chapter 4).

Eyes on the road: speak now, tap later

Cards that wait until you stop

Some cards need a decision but are not urgent: **off the group's route**, a **bike or pillion swap** request, a **historic place** ahead and a **place review**. While you ride, CoRoute says one short line, once, and shows a small chip with nothing to tap, for example "Off the group's route · Stop to choose".

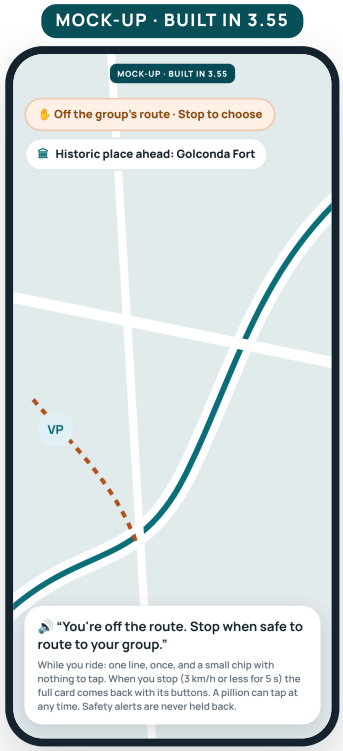

When you stop (3 km/h or less for 5 seconds) the full card comes back with its buttons. A pillion can tap at any time.

Safety alerts never wait. SOS, the crash alarm, "Bike down?", sirens and the missing-rider check always show in full, moving or not.

Why my speed differs from the speedometer

Bike speedometers are made to read **high**. The law allows them to show up to 10% + 4 km/h more than your real speed, never less. So when your speedometer says 86, you are really doing about 79–80, and that is what CoRoute shows, from GPS.

Speed warnings use your real speed, so CoRoute warns you at the right moment. Expect CoRoute to read a few km/h below your bike.

While moving: one spoken line and a chip; the buttons come back when you stop

Hear what matters, keep your music

What you hear

- **Everyday lines** (turns, road warnings, group news, fuel) make your music quieter, then it comes back about a second later. Prefer silence? Turn on **Pause music during alerts**.
- **Emergencies** (SOS, crash countdown, “Bike down?”, a siren close by, “Are you OK?”, riding far over the limit) **pause** your music. With earphones or a helmet set they play **in your ears**, louder for the line, and not on the phone speaker. Without earphones they use the phone’s **alarm sound**, heard even at media volume zero and in Do Not Disturb once you allow CoRoute there.

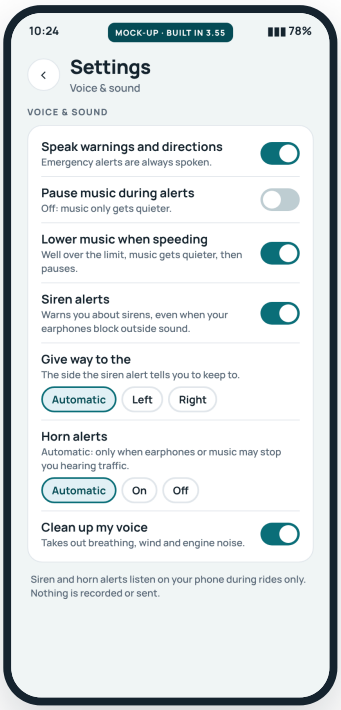

Lower music when speeding

On by default (Settings › Voice & sound). It is a gentle nudge, not a punishment:

YOU RIDE	YOUR MUSIC
10% over the limit	quieter (60%)
25% over	much quieter (30%)
40% over	paused, and you hear “Slow down”
Back under for 5 s	back to your volume

Change the volume yourself and CoRoute leaves it alone. It never lowers CoRoute alerts or the intercom.

MOCK-UP · BUILT IN 3.55

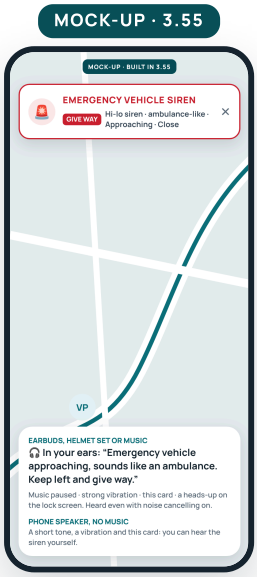

Settings › Voice & sound: music, siren, horn and voice options

During a phone call

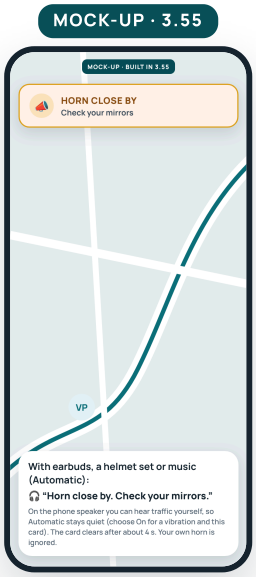

- **Ringing or talking:** everyday lines wait, so nothing talks over your call.
- **Emergencies still get through:** a short tone and a few words in your call audio (the caller does not hear them), a buzz and a notification.
- **After the call** you hear a short catch-up: “Safety alert during your call: …”, then “While you were on the call: 2 road warnings, Asha fell behind.”
- Hands-free intercom talk comes back by itself after the call.

An extra pair of ears on the road

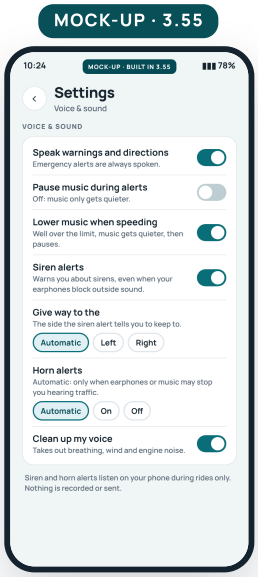

Made for riders who can't hear outside: noise-cancelling earbuds, a helmet set, music. Your phone's own microphone still hears the road and tells you about the ambulance you would miss.

Siren card: in your ears with earbuds or music

Horn card: check your mirrors

Settings › Voice & sound (no group card)

Sirens

- Wail, yelp and hi-lo sirens, including Indian ambulance hi-lo.
- **Earbuds, helmet set or music:** music pauses and you hear in your ears "Emergency vehicle siren close by. Keep left and give way.", plus a vibration, the card and a lock-screen heads-up. Noise cancelling does not block it.
- **Phone speaker, no music:** a short tone, a vibration and the card (you can hear the siren).
- Far away: "siren in the distance". The card adds **Approaching** or **Moving away**.
- Only you are alerted, not your group. **Give way to the**: left or right (Automatic follows your country).

Horns

- Two close horns, or one long very close horn: "Horn close by. Check your mirrors."
- **Horn alerts**: **Automatic** (only when earbuds, a helmet set, music or a call may stop you hearing traffic), On or Off. Your own horn is ignored.

Where to keep the phone. CoRoute listens with the phone's own microphone, never the earbud or helmet mic. Best on a handlebar mount or in a tank bag; in a jacket pocket at speed, wind can hide a siren.

Good to know. One microphone cannot tell direction, so CoRoute says "close by", never "behind": use your mirrors. **Privacy:** checked on your phone during rides only; nothing is recorded or sent.

Your voice, without the wind

Clean up my voice

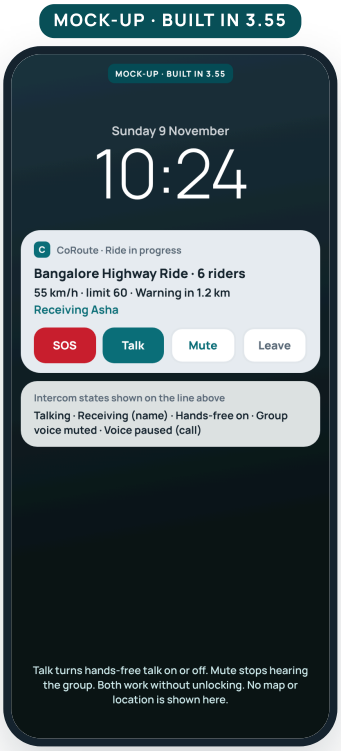

On by default. Before your voice reaches the group, CoRoute takes out wind rumble and engine drone, background noise and breathing, and keeps your level steady so a whisper is heard and a shout does not blast. It adds about 12 milliseconds, which you will not notice.

Hands-free tips

- Hands-free sends only when you speak. Breathing, wind and hiss do **not** open the mic, so the group hears silence, not your breath.
- Start speaking normally; the first word is kept.
- **With a helmet set:** push-to-talk uses the helmet mic while you hold the button; hands-free uses the phone's microphone (cleaned up), so siren alerts keep working. For the clearest voice, use push-to-talk.
- Very heavy gusts may still cut a syllable.
- A phone call pauses talk; hands-free returns after the call.
- One very loud rider is evened out for everyone else.

On the lock screen

- The ride notification shows your speed, the limit, the next warning and the intercom: **Talking**, **Receiving Asha**, **Hands-free on**, **Group voice muted** or **Voice paused (call)**.
- **Talk** turns hands-free talk on or off; **Mute** stops hearing the group. No unlocking needed.
- Another rider's SOS appears over the lock screen with an alarm sound.

Lock screen: ride line with SOS, Talk, Mute and Leave

Change it now, it works now

You never need to stop or restart a ride for a setting. Every change applies straight away, for you and, for group settings, for everyone.

Speed limit: the stricter one wins

Your own speed warning and the group's limit are compared, and the **lower** one warns you. Lower it mid-ride and the next warning uses it; the cockpit and the lock screen show the same number. Near towns and planned stops the group's lower town limit applies on your phone too.

Your settings

- Voice off silences waiting lines at once (emergencies are always spoken).
- Break reminder, solo check-in, data saver and battery saver follow the switch immediately.
- Quick settings show the real state after every tap.
- Change bike in Garage and your group sees the new colour within seconds.

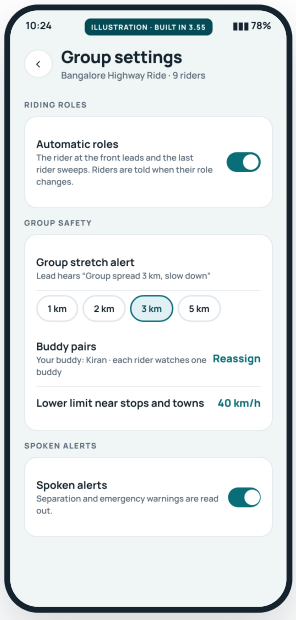

Group settings (trip owner, trip head or lead)

- Distance and stop sliders send when you lift your finger, once.
- No signal? The app says the change was not sent, instead of losing it.
- Spoken alerts off stops queued group lines too.

Crash detection switched off in a countdown?

The running alarm carries on (you might be hurt, or the switch was bumped). The screen says: "Crash detection is off for new alarms. This alarm is still running: tap I'm OK to cancel it." New alarms stop at once.

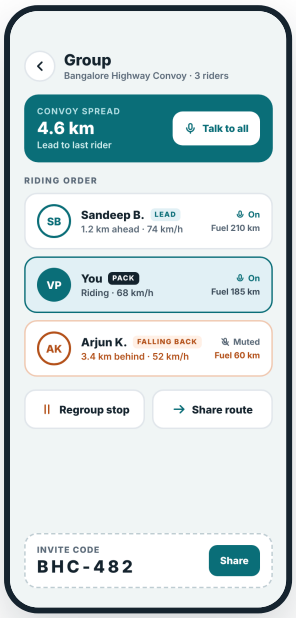

BUILT · ILLUSTRATION

Group settings: changes reach every rider at once

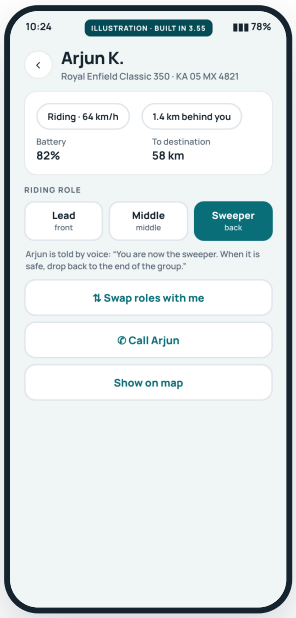

Lead, middle, sweeper: everyone knows their place

DESIGN SCREEN

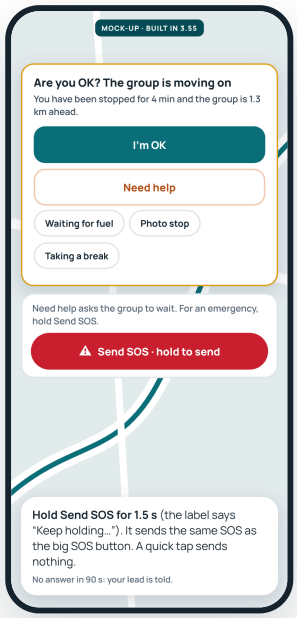

Group: spread, riding order, fuel of each rider

BUILT · ILLUSTRATION

Set a rider's role; they are told to move to the front or back

MOCK-UP · 3.55

Missing-rider check: I'm OK, Need help, or hold Send SOS

BUILT · ILLUSTRATION

Missed a turn? Route back to the group (when stopped)

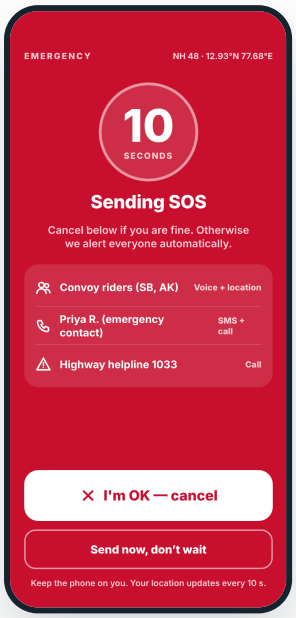

Who is who. Trip owner: created the group or trip. **Trip head**: can change this trip's settings only; only the trip owner removes riders or ends the trip, and choosing a trip head does not make them Lead. **Lead**: rides first and guides the group; **Middle** rides between and the **Sweeper** rides last. Riding roles are positions, not management rights.

- **Riding roles.** The trip owner or the lead sets any rider as Lead (front), Middle or Sweeper (back), or swaps two riders. The rider hears "You are now the sweeper. When it is safe, drop back to the end of the group."
- **Automatic roles** (off by default): the rider at the front leads and the last rider sweeps, with no flickering in a tight pack. An automatic lead only guides; running the trip stays with the trip owner.
- **Stretch alert.** The lead hears "Group spread 3 km, slow down" and gets a suggested regroup stop ahead (fuel, dhaba, rest area).
- **Missing-rider check.** If you stop while the group moves on, your phone asks "Are you OK?". **Need help** asks the group to wait. For an emergency, hold the red **Send SOS** for 1.5 s: it sends a real SOS. No answer in 90 s and the lead is told. Riding as a pair? If you or your pillion answers, it counts for both.
- **Route to group.** Leave the group's route and you can route back to them, ask the group to wait, or continue your way.
- **Buddy pairs** for groups of 7 or more, a **group break planner** when several riders are tired (only a level is shared, never names), and a **roll call** at the start and at arrival.
- **Swap bikes** or change places (rider and pillion) mid-ride; the other rider accepts first (when stopped, chapter 3). Riding pillion from the start: chapter 17.

9 · SAFETY FEATURES (FREE FOR EVERY RIDER)

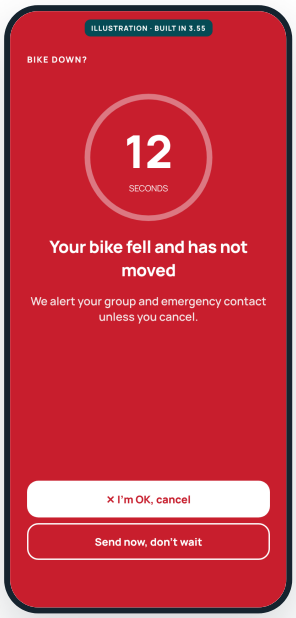

Help comes even when you can't ask for it

DESIGN SCREEN

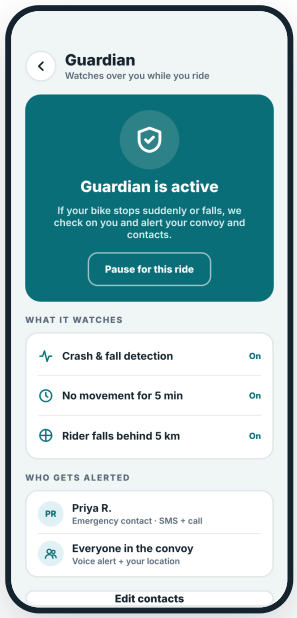

SOS: a countdown, then your group, contact and helpline are alerted

BUILT · ILLUSTRATION

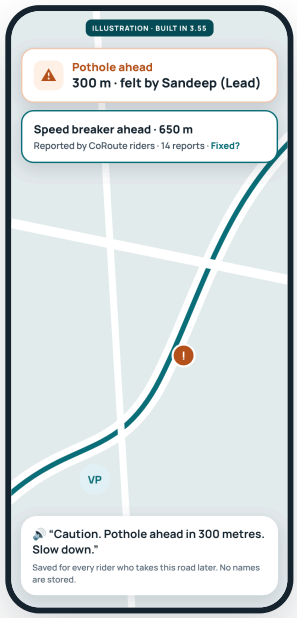

"Bike down?" when your bike falls while stopped

DESIGN SCREEN

Guardian: family follows your ride and is alerted

BUILT · ILLUSTRATION

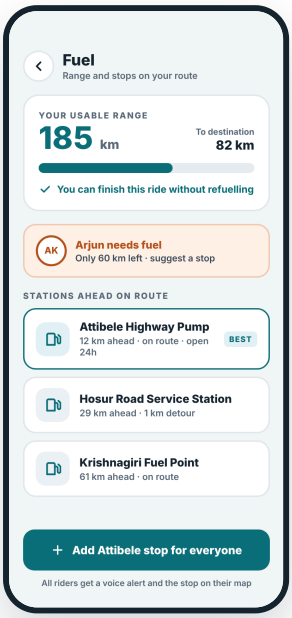

Potholes and speed breakers felt by the lead warn everyone behind

FEATURE	WHAT IT DOES FOR YOU
Crash detection	Senses a fall or impact. A 15-second alarm lets you cancel; otherwise your group, emergency contact and helpline are alerted with your location. It learns from your "I'm OK" answers on your bike, but never ignores a severe impact.
SOS	Hold the SOS button (or Send SOS on the missing-rider card). Delivered to your group; if there is no data, it goes by SMS and is resent until delivered.
Medical info	Always on your lock screen. During your SOS or crash alert it goes to the people helping you: your group, your guardian and a rider who accepts to help (with your emergency contact). Nothing to switch on; it is not shared once the alert is closed.
Guardian and arrival	A family member follows your ride live. When you arrive they get "Arrived safely" and the link stops.
Solo check-in	On a solo ride, if you have not arrived by your expected time plus a margin, CoRoute asks if you are OK, then texts your contact.
Road warnings	Potholes, speed breakers and rough road felt by the rider at the front; sharp-bend warnings; speed limits (stricter near schools and hospitals); stretches where many riders brake hard.
Care on long rides	Break reminders that adapt to how you ride, earlier breaks after sunset, high-altitude reminders above 3,000 m, engine-rest advice for your bike, an SOS battery reserve below 10%.
Nearby riders can help	With your permission, riders of other groups and public rides near you are asked to help in an emergency.

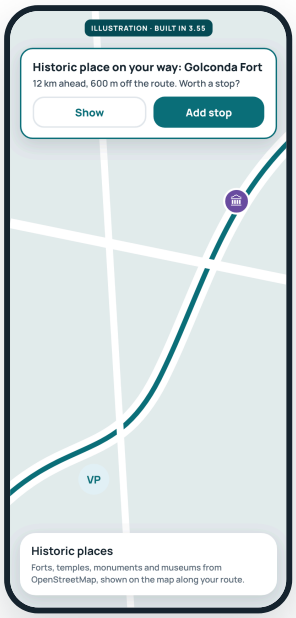

Never run dry, never miss the good stops

DESIGN SCREEN

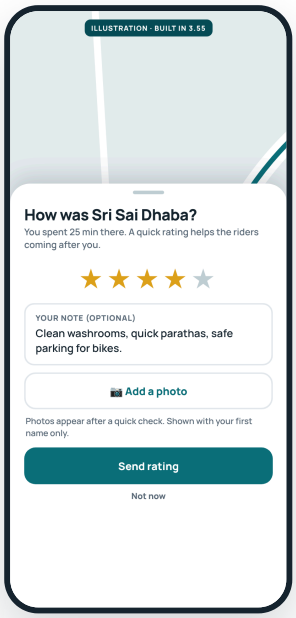

Fuel: your real range and stations ahead for your fuel type

BUILT · ILLUSTRATION

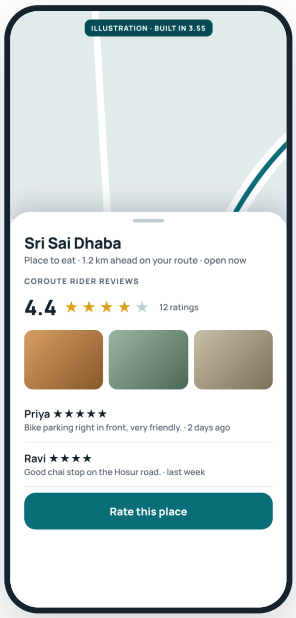

Historic places on your way

BUILT · ILLUSTRATION

After a stop, a polite request to rate it

BUILT · ILLUSTRATION

CoRoute rider reviews with photos and ratings

Fuel

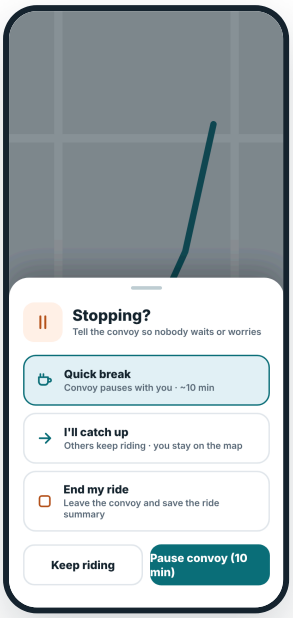

- Usable range from your bike's tank and mileage, updated as you ride.
- Warnings before long stretches without fuel; one tap routes you to the next station that sells your fuel. Your group's plan does not change.
- Stations marked by fuel type (petrol, diesel, CNG, EV).

Places

- Hospitals, mechanics, police, food, stays, toilets, ATMs and viewpoints on the map, with medium-size icons you can read at a glance.
- **Historic places**: forts, temples, monuments and museums near your route, with a gentle "worth a stop?" card.
- **Rider reviews**: after you spend a while at a place, CoRoute asks (only when you are stopped) for a quick star rating, a note and a photo, to help the riders coming after you. Missed it? After the ride you can rate up to 2 places you stopped at.

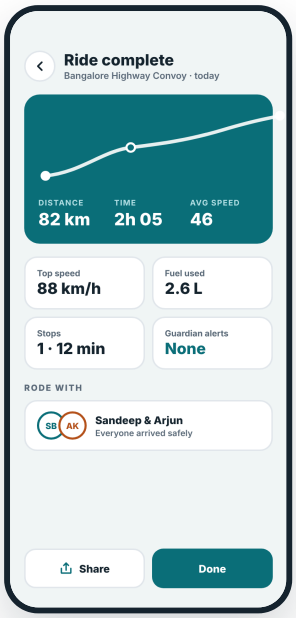

Every ride becomes a story you keep

DESIGN SCREEN

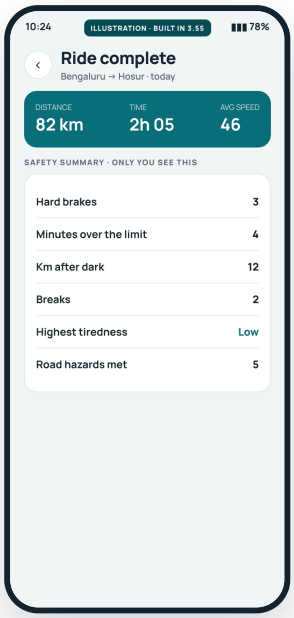

Stopping: tell the group why, so nobody worries

DESIGN SCREEN

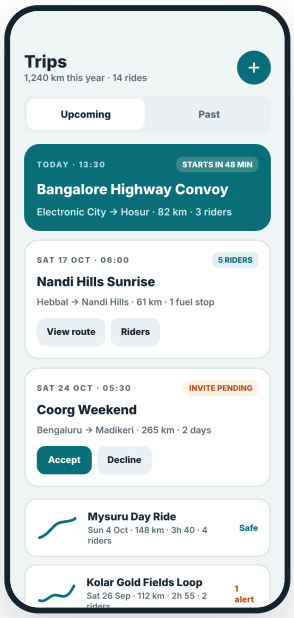

Ride complete: distance, time, speed, fuel

BUILT · ILLUSTRATION

A private safety summary, only for you

DESIGN SCREEN

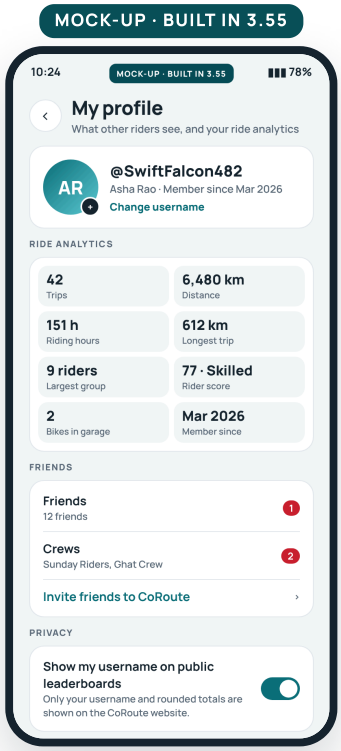

Trips: upcoming and past rides, replay and GPX

- **Stopping:** quick break (the group pauses with you), “I'll catch up”, or end my ride.
- **Trip report:** the route of every rider on one map, replay, share card and GPX export.
- **Safety summary:** hard brakes, minutes over the limit, km after dark, breaks and tiredness. It stays on your phone.
- **Rate the trip** and, with your permission, share your story on the CoRoute website.

Your name on the road, your numbers

Open **Profile › My profile & friends**. This is what other riders see of you, plus the story of your riding so far.

My profile: picture, username, ride analytics, friends, crews and the leaderboard switch

Your username

- Every rider gets a **unique username** automatically, for example **SwiftFalcon482**. It never uses your real name.
- Other riders, your crews and the leaderboards know you by it. Your ride group sees it on your rider card as **@SwiftFalcon482**.
- Want your own? Tap **Change username**. CoRoute checks it as you type (**Available**). You can change it **once every 30 days**; changing only capital letters is always possible.
- 3 to 20 letters, digits or _ , starting with a letter. No real name, phone number or e-mail: it is shown publicly. Names like “admin” or “coroute” and rude words are refused.

Profile picture

Take a photo or **Choose from photos** (JPEG, PNG or WebP). CoRoute makes it smaller and removes location data before it leaves your phone. No picture? Your initials show instead. **Remove picture** any time.

Ride analytics

Trips, distance, riding hours, longest trip, largest group, your rider score (chapter 15), bikes in your garage and member since. A group ride counts once, from the trip report.

Your full name is only on your own profile. Friends see your first name; everyone else sees only your username and picture.

Ride with people you know

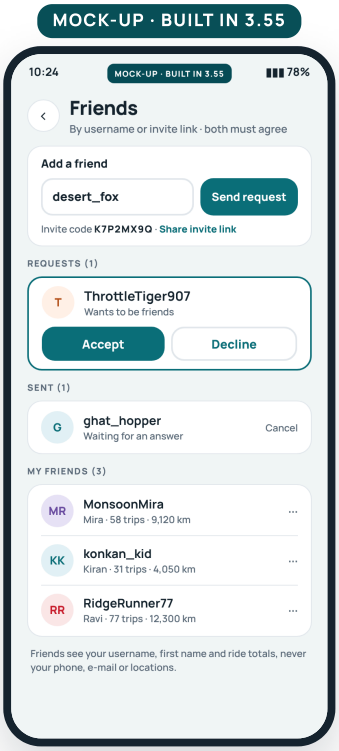

Add a friend

1 **By username:** Friends › **Add a friend**, type their username, **Send request**.

2 **By invite link:** tap **Invite friends to CoRoute** and share the link (“Ride with me on CoRoute”) on WhatsApp or anywhere. It opens CoRoute and sends you a request; a new rider gets the request after signing up.

3 **Both must agree.** They see **Wants to be friends** with **Accept** and **Decline**. Until then your request waits under **Sent**, and you can cancel it.

A red number on **My profile & friends** shows new requests. When CoRoute is closed, a request arrives as a phone notification (chapter 14); during a ride it is a quiet notification, never a ride alert.

Friends: a new request with Accept and Decline, a sent request, your friends

What friends see

WHO	SEES
Any rider	Your username and picture
Friends	Also your first name and ride totals: trips, km, hours, rider score
Nobody	Your phone, e-mail, medical info, emergency contacts, home or any location, plan or payments

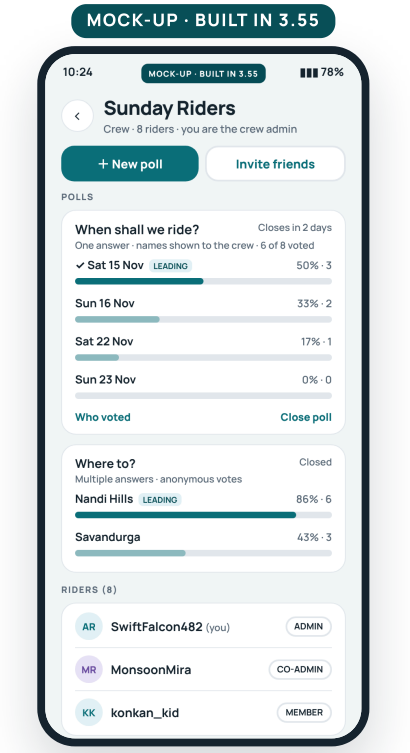

Remove or block

Tap ··· next to a friend: **Remove friend** (you can add each other again later) or **Block**. A blocked rider cannot send you requests or see your profile, and is **not told**. Unblock any time under **Blocked**.

Limits keep it friendly: up to 20 requests a day and 500 friends.

Your riding crew, without the chat noise

A **crew** is your standing circle of riding friends, like "Sunday Riders". Crews plan rides with **polls**. There is no chat: the only thing anyone posts is a vote.

A crew with a live poll, a closed poll and the riders with their roles

Create a crew and invite friends

- Profile › My profile › **Crews** › **Create a crew**. You are the **crew admin**.
- **Invite friends**: you can invite your **friends only** (chapter 13), never strangers, phone numbers or e-mails. They join only when they tap **Join crew**; an invitation lasts 14 days.
- Up to 100 riders per crew. Members see each other's username, first name and picture, nothing else.

Who can do what

	CREW ADMIN	CO-ADMIN (UP TO 3)	MEMBER
Invite friends	yes	yes	no
Start a poll	yes	yes	if the crew allows it
Close or delete a poll	yes	yes	their own polls
Remove riders, roles, settings, delete crew	yes	no	no

Polls

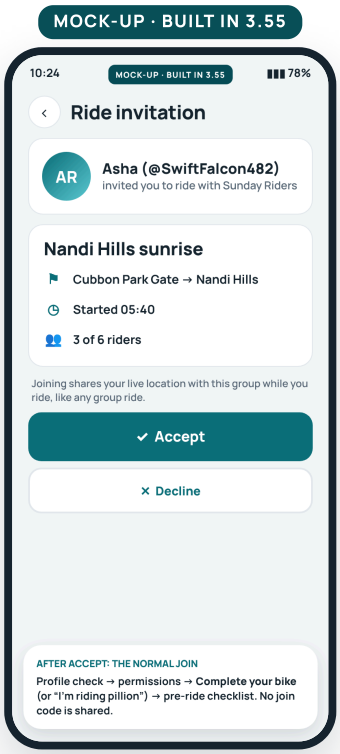

- **New poll**: a question with 2 to 6 options, **One answer** or **Multiple answers**, closing in 10 minutes to 30 days (3 days by default). **Use "Ride date" template** fills "When shall we ride?" with the next weekend days.
- Tap an option to vote; change or remove your vote until the poll closes. Bars update live. Votes are named in the crew unless the poll has **Anonymous votes**.
- Leaving as crew admin? Hand over to a member, or the oldest co-admin takes over.

Start a ride with your crew

The poll picked the day. Now one tap invites the crew to the ride, and each rider joins with **Accept**. Nobody needs the join code.

You pick the riders to invite; their status shows as they answer

Your friend gets a notification and this invitation screen

Invite your crew

1 On the crew screen tap **Start a ride**. Plan and start the ride as usual; then the list of crew members opens. Already riding? The button reads **Invite crew to my ride**.

2 Tick riders, or **Select all**, and tap **Invite 3 riders**. Each one shows **Waiting**, **Joined**, **Declined** or **Expired**, and you get a message when someone answers.

3 Seats follow your plan: a Community plan rides solo, so get a group plan to invite (chapter 18). A full ride says "no seat left".

Only the trip owner of the ride can invite. Invitations end after 12 hours or when the ride ends.

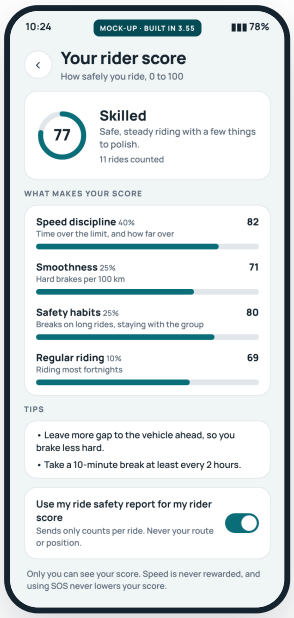

When you are invited

- A **Ride invitation** notification arrives, even when CoRoute is closed: "SwiftFalcon482 invited you to Nandi Hills sunrise with Sunday Riders."
- Tap it: the invitation shows who invited you, the crew, the ride, where it goes and how many riders are in. Tap **Accept** or **Decline**.
- **Accept** joins like any ride: your bike details if they are missing (or "I'm riding pillion"), then the pre-ride check.

Notifications when CoRoute is closed. Friend requests, crew invites, new polls and ride invitations reach your phone as notifications. They name riders by username only, never your location, and hide the text on the lock screen. Turn them off in Settings › Account & privacy › **Push notifications**.

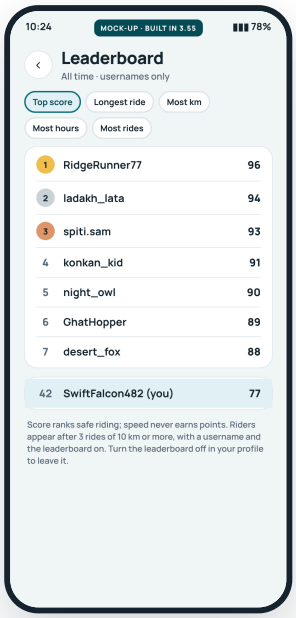

A score for safe riding, never for speed

MOCK-UP · 3.55

Your rider score: level, the four parts and tips

MOCK-UP · 3.55

Leaderboard: usernames only, with your own place

How it is worked out

PART	WEIGHT	WHAT COUNTS
Speed discipline	40%	Time over the speed limit, and how far over. Under the limit, faster never adds a point.
Smoothness	25%	Hard brakes per 100 km
Safety habits	25%	A break at least every 2–2.5 h on long rides; staying with your group
Regular riding	10%	Riding most fortnights

Score 0–100 after **3 rides of 10 km or more**. Levels: **Learner** (under 50), **Steady** (50–69), **Skilled** (70–84), **Ace Rider** (85+). Recent rides count most, so improvement shows within weeks.

Never held against you: SOS, crash alarms, “Bike down?”, hard stops, losing signal and riding at night. Speed is never rewarded.

Tips to raise it

- Keep within the limit on highways, even when the road is empty.
- Leave more gap ahead so you brake gently.
- Take a 10-minute break every 2 hours.
- Stay with your group; one separation in traffic is free.

Private, and your choice

- Only you see your score. **Use my ride safety report for my rider score** sends counts only (no route); turn it off and they are deleted.
- **Leaderboards** (Trips › Leaderboard, and the website): top score, longest ride, most km, hours and rides, by username. To leave, turn off **Show my username on public leaderboards** in My profile.

Your group sees your bike, not a dot

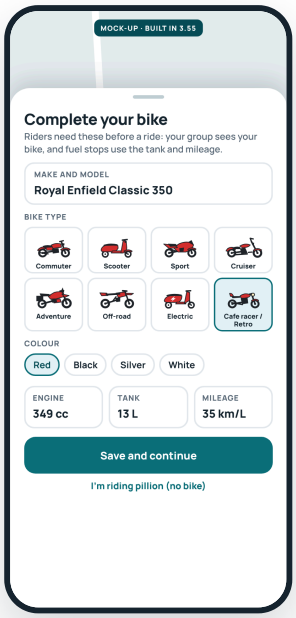

Bike details are needed before you ride

To **create or join a ride as a rider**, your bike needs its details. If something is missing, **Complete your bike** opens right there, already filled in from your model: check it and tap **Save and continue**.

DETAIL	PETROL, DIESEL, CNG	ELECTRIC
Make and model, bike type, colour	needed	needed
Engine size	50–2500 cc	not asked
Tank	2–40 L	battery kWh (optional)
Mileage	5–120 km/L	2–25 km/kWh

Never in your way in an emergency. SOS always works, the sheet never appears mid-ride, and closing it only cancels that create or join. No bike? Tap **I'm riding pillion (no bike)** (chapter 17).

MOCK-UP · 3.55

Complete your bike: type picker with each shape

MOCK-UP · 3.55

Ride map: bike shapes and colours, one with a pillion

On the map

Every bike is one marker: its **shape** (bike type) in its **colour**, facing the way it travels. The ring shows the rider's colour while moving, **amber** when stopped, **red** for SOS; a teal glow is you; **L** and **S** mark the lead and sweeper. A bike with two people has a pillion seated.

Bike types

CoRoute guesses the type from your model; you confirm it in Garage. The same shapes show in your garage and on the map.

Commuter
Splendor, Shine, Platina

Scooter
Activa, Jupiter, Access

Sport
R15, Duke, Apache RTR

Cruiser
Meteor, Avenger, X440

Adventure / Tourer
Himalayan, Xpulse 200T, Scram

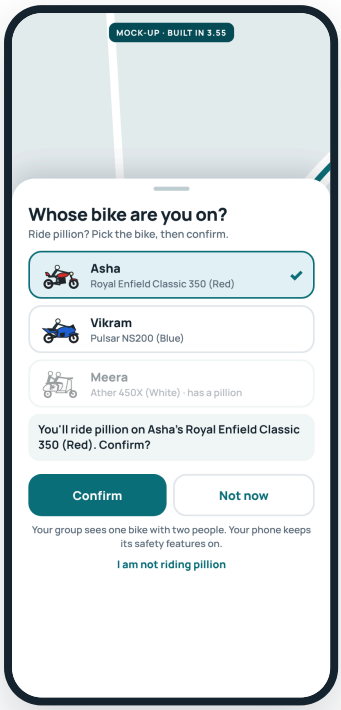

Off-road / Dirt
Xpulse, CRF

Electric
Ather, Ola, Chetak, iQube

Cafe racer / Retro
Classic 350, Interceptor, Hunter

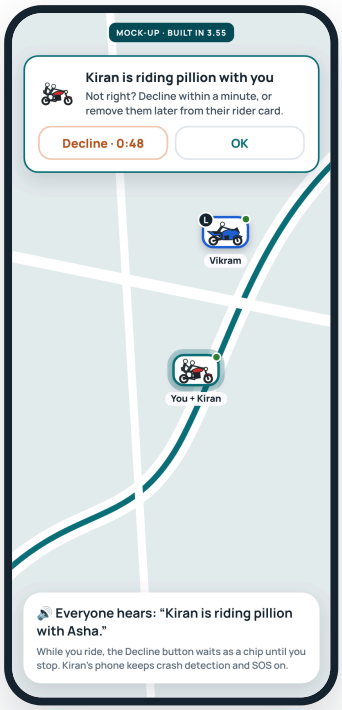

Two people, one bike, both protected

MOCK-UP · BUILT IN 3.55

The pillion picks the bike and confirms

MOCK-UP · BUILT IN 3.55

The rider is told and can decline for a minute

MOCK-UP · BUILT IN 3.55

The group sees one bike with two people

If you sit pillion

1. Join the ride with the code and tap **I'm riding pillion (no bike)**.
2. **Whose bike are you on?** Pick your rider's bike. A bike that already has a pillion cannot be picked.
3. Check "You'll ride pillion on Asha's Royal Enfield Classic 350 (Red). Confirm?" and tap **Confirm**.

Your phone keeps **every safety feature**: crash detection, SOS and fall checks work exactly as on your own bike. Keep it with you.

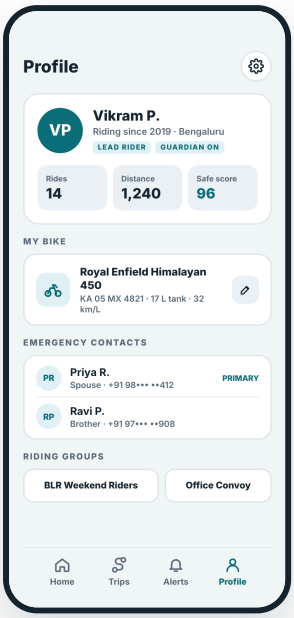

If someone sits on your bike

- Everyone hears and sees "**Kiran is riding pillion with Asha**."
- You get "Kiran is riding pillion with you". Not right? Tap **Decline** within 60 seconds (while riding it waits as a chip until you stop). Later, use **Remove pillion** on their rider card.
- Declined, removed, or the rider left the ride? The pillion is asked "Pick the bike you ride on."

Group safety counts the bike once: the missing-rider check, group spread and break planner see one bike, not two riders. If the rider's phone loses signal, the pillion's phone keeps the bike on the map. When the bike stops and the app asks "Are you OK?", **one answer counts for both**: whoever answers first, on either phone, closes the question on both.

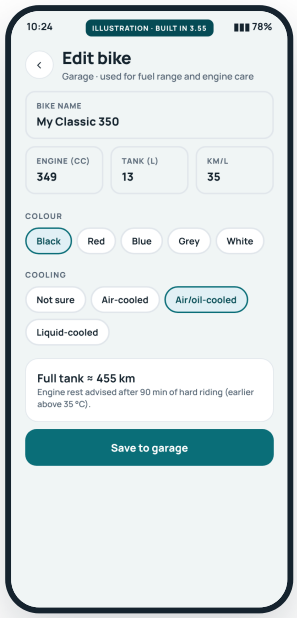

Your details, your garage, your plan

DESIGN SCREEN

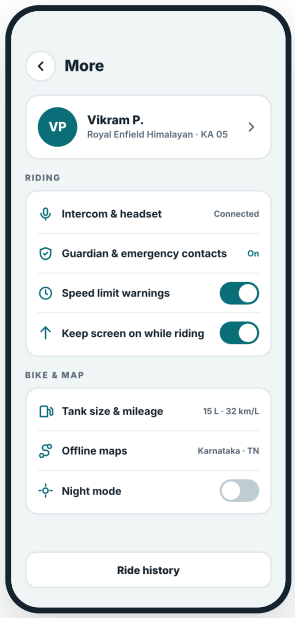

Account: emergency contacts and medical info

BUILT · ILLUSTRATION

Garage: engine cc, colour, cooling, tank, mileage (bike type: chapter 16)

DESIGN SCREEN

Settings: intercom, guardian, speed warnings and more

PLAN	PRICE*	WHAT YOU GET
Community	Free	Solo rides with every safety feature; join anyone's group ride for free.
Small Group (2–6)	₹49 / month	Host group rides for up to 6 riders: live group map, intercom, regroup, roles, group alerts.
Large Group (7–12)	₹99 / month	Everything in Small Group for up to 12 riders, plus buddy pairs.

One plan per group ride. Only the host needs a plan. Everyone who joins with the code rides free and gets the host's group features for that ride.

Medical info in your profile: "Shown to responders in an emergency and on your lock screen."

*Default prices in the app's plan catalogue; CoRoute may change them. Safety features are never locked behind a plan.

Built to protect you, and your data

Privacy

- Your location is shared only with your group while you ride, and with your guardian if you set one.
- The microphone is used only for the intercom while you talk, and for siren and horn alerts during rides (the phone's own microphone); sound is checked on the phone and never recorded or sent.
- Medical info leaves your phone only during your emergency, to the people helping you.
- Phones share levels and events, never raw sensor data. Road reports and hard-brake spots are stored without names.
- Other riders see your **username** and picture; friends also see your first name and ride totals. Never your phone, e-mail, medical info or location. Leaderboards show usernames and rounded totals only; you can leave them (chapter 15).
- Website numbers are totals only, rounded down, shown only once 10 or more rides are behind a number.
- No ads, no selling of data. Delete your account any time: rides, reviews and plans go with it.

When there is no internet

- **Still works:** navigation on the saved route, crash detection, the crash alarm, Medical ID, fuel range and warnings, bend and break reminders.
- **SOS:** sent by SMS when there is mobile signal but no data; saved and sent as soon as signal returns.
- **Phone-to-phone:** today this works when riders join one phone's Wi-Fi hotspot (short range); a no-setup offline link is planned.
- **Needs internet:** intercom voice, chat, live group map beyond hotspot range.

Quick fixes

Group map not updating	Check mobile data; CoRoute reconnects by itself and never ends the ride.
Crash alarm by mistake	Tap "I'm OK". CoRoute learns from it for your bike.
"Fix permission" banner	Tap it and allow location, notifications or microphone again.
No fuel stations	Map data can be patchy in rural areas; use the nearby list or ask your group.
No siren alerts	Allow the microphone for CoRoute; put the phone on a mount or in a tank bag.
Speed below the bike's	Normal: speedometers read high by law. CoRoute shows your real GPS speed (chapter 3).
Asked to complete your bike	Fill in the missing details once (chapter 16), or join as a pillion.
Guest sign-in gone	Guest mode was retired; create a free Community account.

Ride safe. CoRoute helps, but it does not replace a helmet, good gear, rest and your own judgement. In an emergency, call 112.
