Your privacy on CoRoute

A plain-language summary for riders.

App 3.55 · November 2026

This is a short, plain summary. The full privacy policy is on the CoRoute website (in the app: **Profile › Help › Privacy & terms › Privacy policy**). If anything here differs from the full policy, the full policy applies.

In one paragraph. CoRoute collects what a safe group ride needs, shares your position only with the group you ride with and only during the ride, and never sells your data or shows ads. There are no third-party trackers or analytics in the app. Your data is stored in India.

What we collect and why

WHAT	WHY	KEPT FOR
Account: name, username, e-mail, phone number, password (stored only as a hash) or your Google sign-in	To sign you in and let your group reach you	Until you delete your account
Emergency contact	To alert them if you crash or send an SOS	Until you change it or delete your account
Medical info (optional): blood group, allergies, notes	So the people helping you know what matters	Until you clear it or delete your account
Bike details: type, colour, model, engine, tank, mileage	Your bike marker on the map, fuel range	Until you delete them
Live location, speed and battery level	The group map, fall-behind alerts and SOS	During the ride; recorded routes deleted after **90 days**
Trips: reports, timeline, chat and quick replies in the ride	Your trip history and the group's shared timeline	Until you delete them; exact positions removed after 90 days
Five ride counts for your rider score (hard brakes, breaks, highest tiredness, break reminders, minutes over the limit)	Your private rider score	With your account
Voice	Live group talk	**Never stored.** Only who talked and when, for 7 days, to stop abuse
Reviews and photos you choose to send	Trip and place reviews	Until you delete them
Diagnostics log (only if you send it)	To fix problems such as a late alert	30 days on our server

Stays on your phone: crash detection and motion data, siren listening, your tank and mileage numbers, the diagnostics log (until you send it), saved maps (deleted 7 days after the trip) and the safety summary on your trip report.

Who sees what

WHO	WHAT THEY SEE
Your group, during a ride	Your name, username, bike, phone number, live position, messages. Your emergency contact. Your medical info **only while your SOS or crash alert is open**.
Friends	Your username, picture, first name and ride totals
Other riders	Your username and picture only
Guardians you share a link with	What you chose: Basic (status), Live (your location) or Emergency only. Medical info only during an open alert.
A rider of another group who accepted to help you	Your first name, bike type and colour; while your alert is open, your medical info and emergency contact. **Never your phone number.**
Public leaderboards	Your username and rounded totals, unless you hide yourself
CoRoute staff	What they need for safety and support (for example open SOS alerts). They **cannot** see medical info or listen to voice. Every change they make to your account and every view of a diagnostics log is recorded.

Help from nearby riders: always on

When you send an SOS or crash alert, your own group is always alerted first. CoRoute may also ask up to 3 riders of other groups who are riding toward you on the same road. This is part of CoRoute's safety features and has no switch, because it can bring help sooner.

- **Before anyone accepts,** they see only the emergency point, how far it is and roughly how long it takes. No name, no group, no phone number.
- **After a rider accepts,** they see your first name and your bike type and colour, and, only while your alert is open, your medical info and emergency contact.
- **Never shared:** your phone number and your ride mates' numbers.
- When the alert closes, they lose access at once.
- In the same way, you may be asked to help a rider nearby. You can always choose **Can't Assist**.

Microphone and sirens

The microphone is used only during a ride: for group talk when you talk, and for **Siren alerts**. Siren listening runs on your phone; the sound is analysed in short pieces and thrown away. Nothing is recorded or sent. You can turn Siren alerts off in Settings.

Emergency texts and live links

- In an SOS your emergency contact gets a text with your name, the time, a live link and your coordinates. The live link shows your first name and position for 30 minutes, or until the alert closes.

- If your phone sends the text, it goes from your SIM. CoRoute's server can also send it through an SMS provider, which gets only what it needs; numbers are removed from delivery records 48 hours later.

Diagnostics: your choice

The app keeps a technical log on your phone (7 days, 20 MB at most) to help fix problems. It never contains messages, names, phone numbers, e-mail addresses, medical info, passwords or addresses; locations are rounded to about 100 m and written only during rides. It leaves your phone only when you send it: **Send feedback › Attach diagnostics log**, the "send the log of this ride?" question after a safety event, or a support request you approve. **Send safety logs automatically** is off unless you turn it on.

Your choices

- **Switches you control:** Siren alerts, voice alerts, push notifications (each kind), leaderboards, data saver, battery saver.
- **Always on, for your safety:** crash detection, SOS, emergency texts, Medical ID for responders, help nearby riders, ask nearby riders to help me.
- **Guardian links:** stop any link at any time.
- **Delete trips** from your trip history.
- **Delete your account: Profile › Account › Delete account**. It is removed at once: your profile, trips, routes, contacts, safety log entries, chat messages and logs. Rides you shared stay in other riders' history with your name replaced by "Former rider". If you cannot sign in, use the account deletion page on the CoRoute website.
- **Ask for a copy** of your data, or a correction, through the contact address in the privacy policy.

Children

CoRoute is for licensed riders aged 18 and over.
