CoRoute quick start

Set up in ten minutes. Ride safer every time.

App 3.55 · November 2026

Ten minutes before your first ride: install the app, give it the permissions it needs, add the people to call in an emergency, add your bike, then ride.

> **IMPORTANT**
>
> In an emergency, call **112** first. CoRoute alerts your group and your emergency contact, but it does not replace emergency services.

1. Install and sign in

1. Install **CoRoute** from Google Play on your Android phone.
2. Open it and sign in with your **Google account**, or with an **e-mail and password**.
3. CoRoute gives you a **username** (for example `SwiftFalcon482`). Other riders see you by this name. You can change it later in **Profile › My profile**.

You must be 18 or older to use CoRoute.

2. Allow the permissions (and why)

CoRoute asks for each permission when it needs it. Each one has a safety reason:

PERMISSION	WHY COROUTE NEEDS IT
Location: Allow all the time	Your group sees you and crash detection keeps working with the screen off or the phone in your pocket. Used only during a ride.
Notifications	The ride notification, the crash countdown, SOS alerts from your group and friend or crew invites.
Microphone	Group talk (intercom) and **Siren alerts**. Only during a ride. Nothing is recorded.
Nearby devices / Bluetooth	Voice alerts and group talk through your helmet headset or earbuds.
Full-screen alerts (Android 14+)	Shows the crash countdown over the lock screen so you can answer without unlocking.
Battery: Unrestricted / Don't optimise	Stops the phone from closing CoRoute in the middle of a long ride.

Then open **Profile › gear (Settings) › Safety health**. It checks your phone and shows a fix button for anything that is missing.

3. Add your emergency contact and Medical ID

1. Go to **Profile › Emergency contact & Medical ID**. The row is amber until a contact is saved.
2. Enter your **emergency contact**: name and phone number. CoRoute alerts this person if you send an SOS or crash.
3. Optional but useful: **blood group**, **allergies** and **notes for a doctor**. These are shown on your lock screen and to the people helping you, only while your SOS or crash alert is open.
4. Tap **Save**.

4. Add your bike

1. Go to **Profile › My bikes** and tap **Add bike**.
2. Enter the make and model, pick the **bike type** and **colour**, and fill in engine size, tank and mileage (for an electric bike: mileage only).
3. Tap **Save to garage**.

Your group sees your bike on the map in its type and colour. If something is missing when you start or join a ride, CoRoute shows **Complete your bike** first. Riding on someone else's bike? Choose **I'm riding pillion (no bike)** when you join.

5. Start a solo ride

1. On **Home**, tap **Start Ride**. Pick a **Destination** (and stops if you like), name the trip and tap **Confirm and Create Trip**.
2. Tap **Start the ride** and go. Crash detection starts once you are moving, and the screen stays on.
3. No signal where you are going? Use **Ride solo without internet**: crash detection and SOS by text keep working on your phone.

With a destination and an emergency contact set, CoRoute also checks on you if you have not arrived by your expected time.

6. Create or join a group ride

Create a ride

1. On **Home**, tap **Plan a route**. Set the **Destination**, add stops if you like, give the trip a name, and tap **Confirm and Create Trip**.
2. Share the ride **code** with your riders (or invite your crew from **People**).
3. When everyone is in, tap **Start the ride**.

Join a ride

1. On **Home**, tap **Join Ride** and enter the code the trip owner shared. Or open a **Ride invitation** and tap **Accept**.
2. Joining a group ride is always free.

If you cannot host a group ride, the app says so plainly, for example "Hosting a group ride needs a group plan." Group hosting is managed in your CoRoute account on the website. Solo riding and every safety feature are free.

Remember on every ride

- **SOS:** press and hold the red **SOS** button for **3 seconds** until the ring is full.
- **Crash countdown:** you have **30 seconds** to tap **I'm OK**. If you do not answer, your group and emergency contact are alerted.
- **Phone in a handlebar mount** gives the best crash and siren detection. Keep it charged.
